

Industrial Placement Weekly Learning Report

Week Commencing: 22/06/2025

Week No. 8

This document may be typed. Hours should add up to the total worked in the day. The breakdown should be no less than 1 hour and no greater than 4 hours.

Day	Activity	Hours
Monday	Re-checked all previously completed practical work and documentation to verify that obtained testing results, screenshots and written sections were accurate prior to their implementation into the final report. Reviewed technical material and made notes to prepare for writing the final report.	2
Tuesday	Studied LaTeX language, specifically for technical document creation, including document structure, formatting and referencing. Discovered references.bib file to manage citations and bibliographic references in a more scalable and structured manner.	2
Wednesday		
Thursday		
Friday	Compiled the practical work completed throughout the project into the LaTeX report. Added the introduction and conclusion, incorporated the accumulated work completed during the project, organised references using the references.bib file and reviewed the overall document structure.	3
Saturday		
Sunday	Reviewed final report prior to submission, resolving minor issues and improving readability. Found IEEEtranS for ensuring references were in correct alphabetical order, based upon the authors.	1

Weekly Learning Outcomes

Refer to the module learning outcomes to show how work carried out maps to the learning outcomes.

The work completed this week centred on preparing the final version of the project report. Practical work completed over the previous weeks was reviewed, checked against the testing carried out and then incorporated into a single LaTeX document. This helped identify small corrections, improve consistency between sections and confirm that the screenshots, results and technical descriptions matched the work completed.

Learning LaTeX took some time as I had completed the project documentation in Markdown up to this point. During the week I also learned how to use a references.bib file to manage references. This made it easier to keep the bibliography consistent while compiling the final report.

Writing the introduction and conclusion brought together the work completed across Azure, AWS and Google Cloud into a single report. Reviewing the project as a whole also made it easier to compare the practical results from each cloud provider and ensure the final document reflected the work completed during the placement.
